The Measurable Yardsticks To Our Cause

Our interventions at the largest public school district in New Jersey

E-form Approval and Routing System

Objective

Replacing a disparate system with an intelligent web based e form system.

Resolution

The new e-form system are filled out faster because the new age programming associated with it, can automatically format, calculate, look up, and validate information for the user. With routing and notification via e-mail, approval cycle times were significantly reduced. With electronic

submission of completed forms, the institution was eliminating the cost of rekeying data and the associated errors.

Outcome

Zero Error and 100% uptime since going live in 2019

Workshop Management System

Objective

To establish a platform that resolves the absence of a structured training and notification system, enabling effective communication and specific training enrollment tailored to staff needs.

Resolution

We developed a robust workshop management system that centralized training information by department, automated targeted notifications and reminders, simplified registration and seat allocation, and managed session organization for large employee batches.

- **Centralization:** Developed a platform to publish all training information.
- **Automation:** Integrated automated email notifications for updates and reminders.
- **Efficiency:** Simplified the registration process and organized multiple sessions.

Outcome

- Increased participation of relevant employees.
- Reduced irrelevant training sessions.
- Improved communication and reduced administrative workload.
- Enhanced training program efficiency and participant satisfaction.

Facility Rental Management System

Objective

A Rental Management system that addresses the need for management and monetizing of Idle Assets.

Resolution

We created an integrated facility management system that allows institutions to publish available assets available for rent. This system facilitates the booking process, eliminates manual intervention and errors. It provides real-time availability status, facilitating seamless asset allocation.

- **Asset Management:** Unified all institution's assets into a cohesive, accessible platform, ensuring easy management.
- **Process Automation:** Automated all aspects of the booking process, from availability checks to notifications, cutting down on human errors.

- Operational Efficiency:

Streamlined the entire rental process by eliminating scheduling conflicts and ensuring accurate bookings.

Outcome

- Add on revenue through effective renting of institution assets.
- Streamlined administrative booking tasks and significantly monetized assets
- Provided a superior user experience by simplifying the rental process.
- Optimized asset management, leading to more revenue growth.

Student Transcript Application

Objective

Formulate a resilient and accessible archival system that securely stores student academic records.

Resolution

We implemented advanced student transcript software (STS) designed to address the need for meticulous data preservation and accessibility to maintain detailed academic histories. This system securely archives detailed transcript data, offering students lifelong access to their academic records.

Outcome

- **Data Preservation:** Ensures the storage and printing of student academic records even decades after they have graduated.

- **Data Security:** Utilizes advanced security measures to protect sensitive academic data from breaches and loss.
- **Permanent Record Access:** Students can easily retrieve their transcripts and academic histories at any point, providing lifelong access.
- **Emotional Value:** Strengthened alumni connections by preserving and providing access to their academic milestones.
